

10481us Renaming ActiVote Devices in ActivInspire

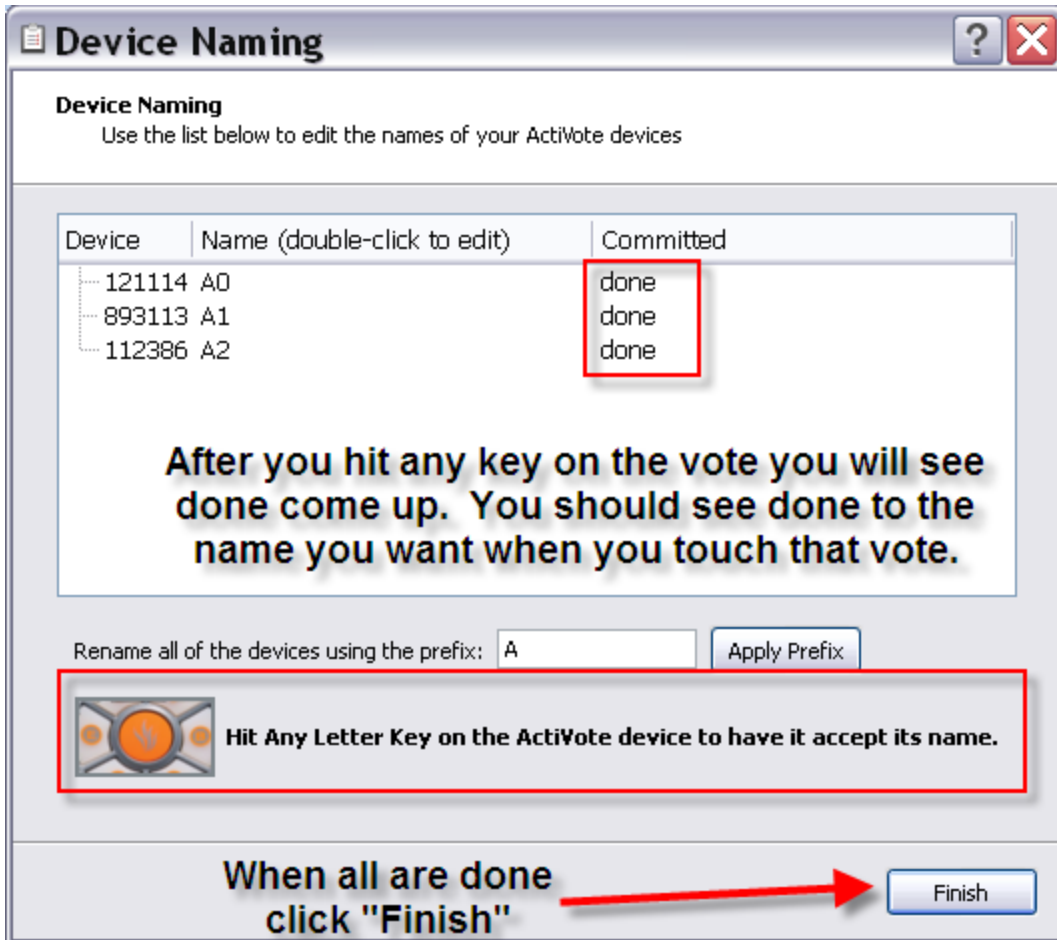

Applicable to:

ActivInspire / 2.4GHz ActiVote Devices

Solution

In order to rename your ActiVotes, they must first be registered. Please follow the directions [here](#) for more information. If your votes have numbers on them, start with the last one- automatic naming starts with 0 instead of 1, so starting with your last vote and then going normally from 1 allows us to rename the last vote and avoid that 0. Note that renaming must be done immediately after device registration in order for the order of the registered devices to be maintained. Once you're done with registration...

That is what saves them to the hub in the order that you want them to be.

Now you will rename A0 to the last vote you have.
